CHAPTER 5 Cell Growth and Division

Cell division and growth. In unicellular organisms, cell division is the means of reproduction; in multicellular organisms, it is the means of tissue growth and maintenance. Survival of the eukaryotes depends upon interactions between many cell types, and it is essential that a balanced distribution of types be maintained. This is achieved by the highly regulated process of cell proliferation.

Cell - Cell division and growth | Britannica

Cell division produces new cells from pre-existing ones in order to help in growth, replacement, repair and reproduction in all living organisms. During cell division a cell divides into two daughter cells (mitosis) or four daughter cells (meiosis). These are exactly similar to each other as well as resemble the parent cell.
